Net investments in financial leasing can be broken down as follows:		
- Maturity less than 1 year	185	179
- Maturity more than 1 year and less than 5 years	2,081	1,559
- Maturity more than 5 years	573	610
Total net claims	2,839	2,348

#### Loans and other commitments to customers specified by risk group

The Bank calculates default probabilities for all customers in the loan portfolio at the loan approval date. This is done on the basis of key figures on earnings, financial strength and behaviour. Default probability is used as a basis for risk classification of the customer. Further, risk classification is used to assign each customer to a risk group. See note 12 on credit risk exposure for each internal risk rating.

Customers are rescored in the Bank's portfolio system on a monthly basis.

Exposures are monitored with a basis in the exposure's size, risk and migration. Risk pricing of business exposures is done with a basis in expected loss and economic capital required for each exposure. Expected annual average net loss is calculated for the next twelve months. Expected loss is within the limits set for maximum expected loss by the Board of Directors, NOK 408m (326m) in the parent bank and NOK 445m (356m) in the group as of 31 December 2017.

Collectively assessed write-downs are calculated with a basis in customers who have shown negative migration since the loan approval date but for whom no individual write-down has been assessed.

The Bank uses macro-based stress tests to estimate write-downs required as a result of objective events that were not reflected in portfolio quality at the time of measurement.

Risk group default and written down consist of customers default by over 90 days and individual write-downs.
